Maven

問題一

Maven 3.8.1 的錯誤訊息

```
org.springframework.boot:spring-boot-starter-parent:pom:2.5.12 failed to transfer from http://0.0.0.0/ during a previous attempt. This failure was cached in the local repository and resolution is not reattempted until the update interval of maven-default-http-blocker has elapsed or updates are forced. Original error: Could not transfer artifact org.springframework.boot:spring-boot-starter-parent:pom:2.5.12 from/to maven-default-http-blocker (http://0.0.0.0/): Blocked mirror for repositories: [central (http://10.42.70.218/artifactory/libs-release, default, releases), snapshots (http://10.42.70.218/artifactory/libs-snapshot, default, releases+snapshots)]
```

Since Maven 3.8.1 http repositories are blocked.

解決方式

- File > Settings
- 搜尋 Maven ， Build, Execution, Deployment > Build Tools > Maven ，調整 Maven home path: "D:\development-tool\apache-maven-3.6.3"

問題二

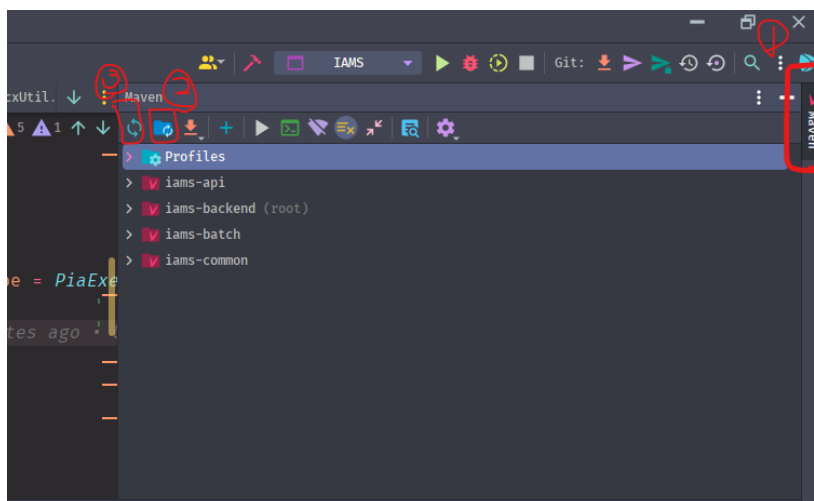

package: com.funbonlife.boot.error does not exist ，com.funbonlife.boot 套件內容找不到導致無法build

解決方式

清掉 C:\Users\\${使用者目錄}\.m2\repository\com\funbonlife\spring-boot-starter-fbl\2.5.XX

之後點一下reload all maven project 重抓lib

1. 右邊的maven側邊欄點開
2. 點擊②，等②跑完點③

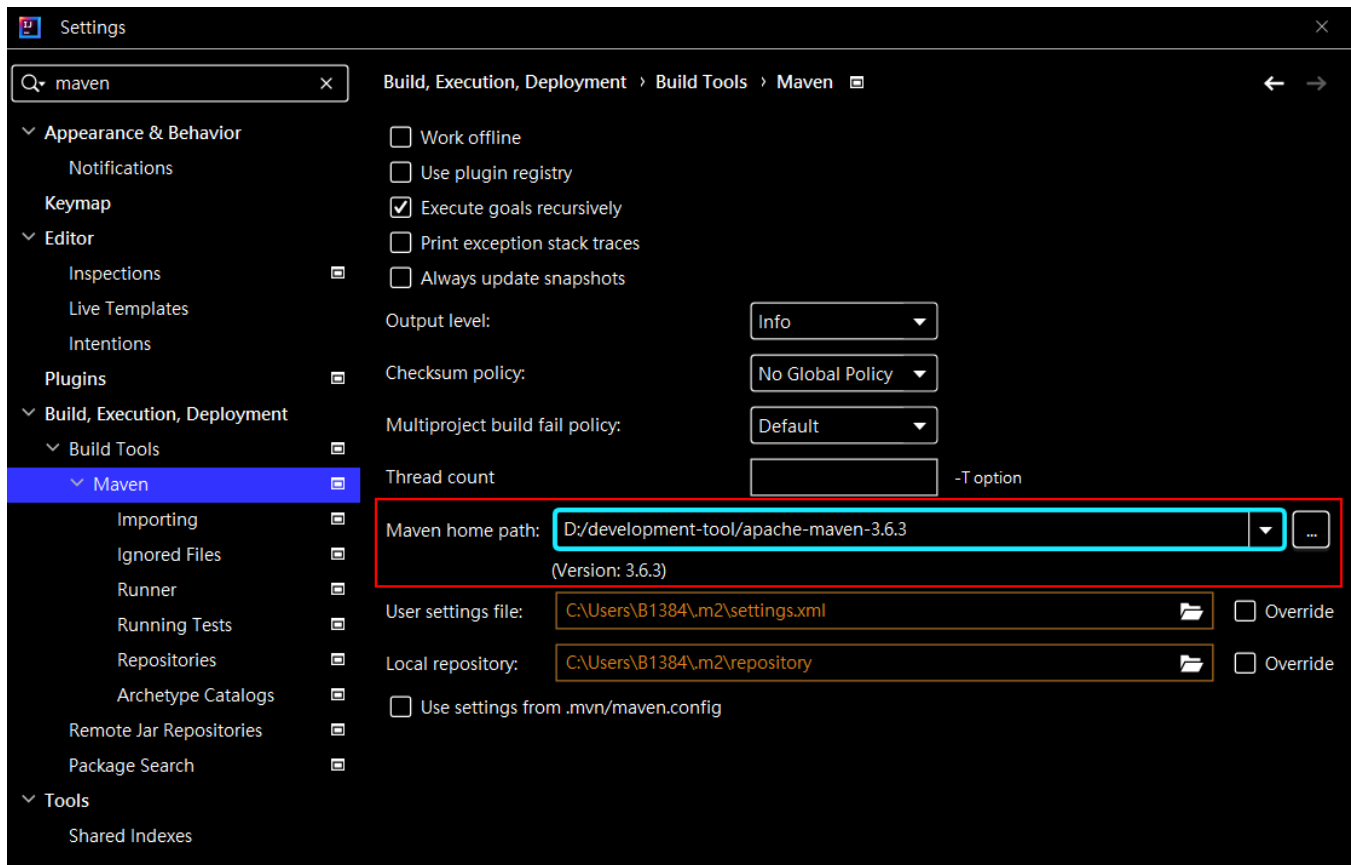

問題三

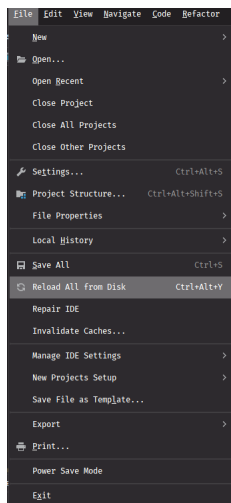

org.apache.maven.plugins 套件內容找不到導致無法包版

解決方式

1.maven設定

2. File > Settings > Reload All from Disk

3. File > Settings > Invalidate Caches ...
